

Blue Chalk Sticks

Kleinia mandraliscae

A native of South Africa, blue chalk succulents are often a favorite of succulent growers. *Senecio talinoides* subs. *mandraliscae*, also called blue chalk sticks, is possibly a hybrid and was found in Italy. The South African native is called blue chalk succulent or blue fingers for its attractive bluish, finger-like leaves. It also produces white summer blooms.

Native to South Africa, the succulent known by the name blue fingers, Blue Chalk Sticks, or *Senecio Serpens*, is often a favorite amongst succulent lovers. *Senecio talinoides* subs. *Mandraliscae* is thought to be a hybrid species of Blue Chalk Sticks and was found in Italy. Having powdery blue, almost alien-looking, finger-like leaves, this gorgeous succulent also produces stunning white summer flowers. This beautiful shaggy plant will bring contrast and an excellent focal point to any part of the home.
